The Truthful Product Story

SUPPORTED USER VALUE

- Review-before-change desktop setup helper.
- Keeps shared developer-tool choices separate from project-level choices.
- Surfaces curated extras and shows a visible plan before approval.
- Backup-first cleanup for eligible local skill folders.

EXPLICIT BOUNDARIES

- Not a guarantee about third-party tools, commands, or services.
- Does not silently delete credentials or unreviewed folders.
- Discovery is read-only by default (pending final code verification).
- No affiliation or endorsement by Anthropic, Claude, or GitHub.

Listing Copy: Conditional Draft Approval

CLAIM CATEGORY	STATUS	CONDITION / RATIONALE
Setup steps & curated choices	SAFELY CLAIMED	Supported by public user manual and documentation.
Review plan before approval	SAFELY CLAIMED	Supported by public terms and product disclaimer.
Microsoft-certified / Store-ready	EXCLUDED	No evidence exists; submission is blocked.
Windows EXE / Silent install	EXCLUDED	Current release is ZIP; silent install contradicts review workflow.
Discovery is read-only by default	CONDITIONAL	Requires revalidation against the final Electron build.

Screenshots Must Be Evidence

REQUIRED CAPTURE ORIGIN

- Native app window only.
- Captured from the exact installed MSIX candidate.
- Tested on a clean Windows device.
- PNG format, $\geq 1366 \times 768$, ≤ 50 MB.
- Captions belong in Partner Center, not burned into pixels.

PROHIBITED MOCK SOURCES

- Browser previews or web pages.
- Renderer running outside the installed MSIX.
- Fixture data or mocked IPC bridges.
- Forced status or button states.
- Composited or AI-generated mockups.
- macOS or Linux sessions.

Capture Manifest Creates Traceability

What the Current Evidence Proves

VERIFIED EXISTS

- Canonical Electron desktop source.
- MSIX build scripts and AppX assets.
- Actual unsigned x64/ARM64 candidate built at [f62ef8b...](#)
- Current direct-download Windows ZIP.

STILL REQUIRED FOR STORE

- Protected Partner Center identity configuration.
- Independently verified unsigned MSIX bundle.
- Matching clean-Windows test record.
- Genuine native screenshots from that candidate.

Five Sequential Release Gates

01 Source & Identity

Canonical desktop source + protected Partner Center identity values.

02 Windows Candidate

Build x64/ARM64 packages on Windows; verify unsigned bundle SHA-256.

03 Clean-Device Test

Test install, launch, real workflows, and uninstall on clean Windows.

04 Native Captures

Capture native screenshots; complete manifest and asset audit.

05 Owner Approval

Publish URLs, complete IARC, review exact payload, and approve submission.

Only Three Final-Candidate Controls Remain

OWNER-CONFIRMED AVAILABLE

- Explicit policies and public policy URLs.
- Matching Store screenshot set.
- Listing metadata, copy, Keywords, and commercial selections.
- Policy and screenshot assets retain their original provenance.

THREE REMAINING CONTROLS

- Place exact Partner Center identity values in protected build inputs.
- Independently verify the resulting final unsigned bundle.
- Run clean-Windows install, launch, workflow, and uninstall test.
- Bind existing screenshots and URLs to final manifest; recapture only if UI changes.

Decision: Bind, Verify, Test

1. Bind

Select the exact candidate commit and apply protected Partner Center identity values.

2. Verify & Test

Independently verify the final unsigned bundle, then run the matching clean-Windows test.
